2025 PEST MANAGEMENT GUIDE: INSECT

Cultural Insect Management

Are you sure you need to act?

It is critical that we make sure an insect pest is present at damaging levels in a field before taking management action. Managing an insect is expensive in labor, equipment, and products, so make sure you have a problem before taking action.

Scouting and adopting action thresholds to inform management decisions is key to reducing unnecessary or untimely applications of pesticides. Comprehensive guides and information on how to scout and trap insects, and recommended action thresholds for insect pests can be found here:

https://extension.umaine.edu/blueberries/factsheets/insects

Cooperative Extension **CULTURAL INSECT MANAGEMENT IN WILD BLUEBERRY INSECTS M**ETHOD **COMMENTS** Harvesting techniques that reduce fruit loss can minimize Harvesting the number of infested fruits left on the plants and on the around. Blueberry Maggot Management Keep isolated fields in the same cycle. Winnower cleanup Compost, burn or dispose of winnower refuse. Flea Beetle, Sawfly, Fire pruning Blueberry litter must be ignited. Spanworm Burn curled stems as soon as extensive curling occurs in **Thrips** early spring, but not later than July 1 in a nonbearing crop Fire pruning or reduction in next year's fruit buds will occur. Monitor adult and larval populations; Refer to Cooperative Extension Bulletin No. 210, Spotted Wing Drosophila: Spotted wing Early harvest Pest Biology and IPM Recommendations for Wild drosophila Blueberries for additional information.

Chemical Insect Management

THIS CHART IS NOT A SUBSTITUTE FOR READING AND FOLLOWING THE LABEL. It is unlawful to use any pesticide for other than the registered use. Read and follow the label on the product container. The user assumes all responsibility for use inconsistent with the label. Trade names are used for identification. No product endorsement is implied, nor is discrimination intended against similar materials. Cooperative Extension makes no warranty or guarantee of any kind concerning the use of these products. Check with your processor regarding PHI restrictions or MRL restrictions for export sales. For organic growers, check with your certifier that the product is approved by them and that the product has current OMRI certification.

Extremely toxic to fish Moderately toxic to fish

Can be aerially applied

Extremely toxic to bees Moderately toxic to bees

Extremely toxic to birds Moderately toxic to birds

Extremely toxic to people

1865 THE UNIVERSITY OF

Moderately toxic to people

					NOCOTIONES		H ENVIRONMENTAL	LICOR	JI LIVOI	-
GROUP ^a USE ^b & TOXICITY		AERIAL APPLICATION	INSECTICIDE	ACTIVE INGREDIENT & SIGNAL		RATE: PER/ACRE & MAX/ACRE/YR	PHI Days	REI Hrs.	Notes	
1a	BMF SWD	2	Depends on Formulation	Sevin (several formulations registered)	carbaryl	Warning	See label Max: 5 applications; 10 qt max/acre/crop year	7	12	Do not apply more than once every 7 days. Do not apply during bloom or just prior to bloom; high toxicity to bees and aquatic invertebrates. Avoid irrigation for 48 hrs post-application. Flea beetle adults only. Human & Environment: NS, 7 day persistence
	THRIPS	Toxic to shrimp and crab	NO	Diazinon (several formulations registered)	diazinon	CAUTION	See label Max: See label (2 lb ai)	7	5 days	Do not mix with any Captan product. See label for dilute vs. concentrated spray. Make first application when sprouts are 0.25-0.5 inch, 2 nd application when sprouts are 0.5-1 inch. Avoid applying when bees are present. Human & Environment: NS , 11 day persistence
1B	SWD THRIPS	TI AND	Depends on Formulation	Malathion (several formulations registered)	malathion	Warning	See label Max: 1.25 lb ai./acre; 3 applications/year	1	12	Minimum retreatment interval is 5 days. Apply at 10 day intervals for BMF. High runoff potential after application. Highly toxic to bees if sprayed directly. Human & Environment: NS, 3 day persistence 7 day minimum retreatment intervals for SWD. Potential for phytotoxicity at reduced rates. See label for dilute vs concentrated spray. Highly toxic to bees if sprayed directly. Human & Environment: NS, 3 day persistence
	BMF SL, FB SRW SWD		NO	Imidan 70 WP	phosmet	Warning	1.3 lb Max: 5 app; 5 1/8 lb (3.63 lb ai) for all	3	3 days	Apply at 7-10 day intervals. Highly toxic to bees if sprays or come into contact with treated foliage up to 7-10 days after spraying; do not spray 10-14 days PRIOR to bloom Human & Environment: NS, 10 day persistence
3	BMF SL		797	Asana XL	esfenvalerate	WARNING	4.8 to 9.6 oz Max: 38.4 oz (0.2 lb ai)	14	12	Do not apply within 7 days of pollination. Human & Environment: NS, 7 day persistence
3A	SWD		797	Mustang Maxx	zeta- cypermethrin	Warning	4 oz (4 oz SWD) Max: 24 oz (0.15 lb ai)	1	12	Apply at least 7 days apart. See 2ee labels for BMF (suppression only) and SWD. Direct spray and residue is highly toxic to bees, do not use prior to or during bloom. Human & Environment: NS, 21 day persistence
4A	BMF Thrips	İİ	797	Admire Pro Systemic Protectant	imidacloprid	CAUTION	Foliar 2.1 to 2.8 oz Max: Foliar: 5 app; 14 oz (0.5 lb ai) for all	foliar 3	12	Do not use prior to or during bloom. Highly toxic to bees used as a foliar spray during bloom. Foliar : For sprout application during emergence of thrips and tip midge. Apply at least 7 days apart. Human & Environment: S, 7 day persistence
	BMF FB SWD	2	7 9₹	Assail 30 SG Assail 70 WP	acetamiprid	CAUTION	4.5 to 5.3 oz (SWD – 5.3 oz) Max: 5 app; 26.7 oz (0.5 lb ai) 1.7-3.0 oz Max: 2 App; 6 oz (0.26 lb ai)	1	12	Do not apply more than once every 7 days. Add 1 lb/a sugar to spray tank to enhance performance for SWD ONLY. Toxic to bees exposed to direct treatment; do no apply while bees are actively visiting treatment area. Human & Environment: S, 7 day persistence
	BMF SWD THRIPS	2	797	Montana 2F Montana 4F	imidacloprid	CAUTION	Foliar 4.8 to 6.4 oz Max: Foliar 5 app; 32 oz (0.5 lb ai) for all Foliar 2.4 to 3.2 oz Max: Foliar 5	3	12	Foliar : Apply at least 7 days apart. Rotate to another mode of action after 3 applications. Do not apply foliar after applying a soil application of any Group 4A produc Avoid use prior to and during bloom. Highly toxic to bee Sprout application during emergence for thrips; make 1s application when sprouts are 0.25-0.5 inch, 2nd application when sprouts are 0.5-1 inch.
4D	BMF THRIPS		797	Sivanto 200 SL	flupyradifurone	CAUTION	app;16 oz (0.5 lb ai) 10.5 to 14 oz Max: 28.0 oz (0.365 lb ai).	3	4	Human & Environment: S, 7 day persistence Apply at least 7 days apart. See 2ee label for thrips. Human dermal toxicity is moderate. Human & Environment: S
5	SL SRW SWD	→	794	Entrust SC	spinosad	1	4 to 6 oz Max: 6 app, 3 for thrips 29 oz (0.45 lb ai total for all spinosad)	1	4	Allowed for Organic production. Toxic to bees up to 3 hrs following treatment. Once it dries on foliage, toxicity LOW. Apply at least 6 days apart; after 2 nd application rotate to products other than Group 5. May be used with adjuvants. See supplemental label for reduced PHI for SWD suppression. Human & Environment: NS, 1.5 day persistence
	BMF		797	GF-120 NF Naturalyte Fruit Fly Bait	spinosad	CAUTION	10 to 20 oz 1:1.5 product to water ratio Max: 5 app; 0.45 lb ai total for all spinosad	1	4	Allowed for Organic production. Specialized applicate equipment is required. Apply every 7-14 days. Do not rotate with other Group 5 products. Toxic to bees if sprayed directly. Human & Environment: NS, 1.5 day persistence
	BMF FB SRW SWD	**	797	Delegate WG	spinetoram	CAUTION	3 to 6 oz (3-6 oz SWD) Max: 6 app (3 for thrips); 19.5 oz (0.305 lb ai)	3	4	Do not apply more than once every 6 days, and no more than two consecutive applications of any Group 5 insecticide. Highly toxic to bees if sprayed or come into contact with wet treated foliage. If foliage is dry, toxicity very low to bees. Do not rotate with spinosad products. Human & Environment: NS , 5 day persistence
11	SL		797	Bacillus thuringiensis , (several formulations registered)	Bacillus thuringiensis		See label Max:	check label	4	May use when bees are present. Most effective on smearly instar blueberry spanworm larvae. This bioinsecticide is NOT effective against winter moth larvae. Do not apply within 300 ft of any threatened or endangered Lepidoptera. Product(s) may be OMRI liste e.g. Javelin WG. Human & Environment: NS, 3 day persistence
18	SL		797	Intrepid 2F	methoxyfenozide	CAUTION	10 to 16 oz Max: 3 app; 48 oz (0.75 lb ai)	7	4	Caterpillar control. Do not apply more than once every of days. Spreaders/binders may help maximize coverage. Can use just prior to bloom without detrimental effects of bees. Drift and runoff from applications of this product may be hazardous to sensitive aquatic invertebrates in water bodies adjacent to treatment area. Human & Environment: NS, 15 day persistence
28	BMF SWD	†† ∛	79-7	Exirel	cyantraniliprole	CAUTION	13.5 to 20.5 oz Max: 62 oz (0.4 lb ai)	3	12	Rotate with products with different modes of action; minimum interval between treatments is 5 days. Direct contact and exposure to residue is toxic to bees. Human & Environment: S, 14 day persistence
	SWD	Ĭ İ ∰	797	Verdepryn	cyclaniliprole	CAUTION	8.2 to 11.0 oz Max: 33 oz (0.22 lb ai)	1	4	This product is highly toxic to bees and other pollinating insects exposed to direct treatment or to residues in/on blooming crops or weeds. Make no more than 3 applications per year. The minimal interval between treatments is 5 days. Human & Environment: S, 14 day persistence
m	FB	ŤŤ	794	BotaniGard ES	Beauveria bassiana	CAUTION	0.5 to 1.0 qt Max: none	0	4	Apply at 5-10 day intervals in the evening as sunlight destroys spores. Clean all fungicide residues from tank they will destroy the <i>Beauvaria</i> spores and inactivate the product. Human & Environment: NS, 2 day persistence
wn				AzaGuard,		Z	Foliar 10 to 16 oz (see exceptions) + COC 1% v/v			Effective on SWD under low to moderate pressure; one SWD numbers build, switch to another product. When infestation is heavy or canopy dense, use up to 2x rate

(Azaguard rate only)

Max: None; 22.5 oz

AzaGuard per app

(0.75 lb/20 g ai all

azadirachtin per

app)

0

not to exceed 22.5 oz/a/application. Use ½ rate when

Human & Environment: NS, 7 day persistence

2-3 applications at 7-10 day intervals.

combining with other insecticides. Do not mix with highly

alkaline products or exceed mix pH 7. Label recommends

SWD

(several

formulations

registered)

^aTo reduce the likelihood of insecticide resistance developing in target pests, growers should rotate between insecticides with different group numbers in the growing season, ideally using multiple group numbers. Products with the same group number should not be used in consecutive sprays.
