# Maine Invasive Species Network

The Maine Invasive Species Network (MISN) brings together research, education, and outreach professionals who work with invasive species in Maine.

<http://umaine.edu/invasivespecies/>

## Purpose of MISN

- Serve as a communication tool
- Help members identify and pursue collaborative projects
- Support research on management of invasive species
- Map invasive species populations
- Present funding opportunities
- Exchange species-specific information
- Explore new tools to monitor populations
- Develop and distribute educational materials
- Provide outreach opportunities
- Exchange database tools

## MISN-L Listserv

The MISN-L Listserv is an e-mail list established by the Maine Invasive Species Network (MISN) to assist in the distribution of information related to invasive species research, management, outreach and education within the State of Maine. This all-taxa interest group includes marine species, terrestrial and aquatic plants, forest and insect pests and diseases among others and is intended to focus on species currently in or considered a threat to Maine ecosystems.

Suitable subject matter includes the announcement of meetings and working groups, funding, collaborative projects, new research and publications as well as other information that may be of interest to those working on research, management and education efforts related to invasive species.

The MISN-L listserv includes all current members of the MISN group and is intended to connect those working on Maine invasive species issues for the purposes of data sharing, development and distribution of educational materials and exchange of information and ideas regarding invasive species.

**If you work on invasive species in Maine and would like to subscribe to the list, please contact Dr. Andrei Alyokhin at [alyokhin@maine.edu](mailto:alyokhin@maine.edu)**
