Phenophase Definitions

Monarch Butterfly, Danaus plexippus

Directions:
As you report on phenophase status (Y, N or ?) on the datasheets, refer to the definitions on this sheet to find out what you should look for, for each phenophase in each species. For reporting animal abundance, if a specific question is included below the phenophase, choose the best answer to the question. If there is no specific question, enter the number of individual animals you observed in each phenophase.

Activity

Active adults
One or more adults are seen moving about or at rest.

Flower visitation
One or more individuals are seen visiting flowers or flying from flower to flower. If possible, record the name of the plant or describe it in the comments field.

Migrating adults
Multiple adults of the same species are seen flying steadily in a uniform direction without stopping.

Mating
A male and female are seen coupled in a mating position, usually end to end. This can occur at rest or in flight.

Development

Active caterpillars
One or more caterpillars (larvae) are seen moving about or at rest. When seen on a plant, if possible, record the name of the plant or describe it in the comments field.

Caterpillars feeding
One or more caterpillars are seen feeding. If possible, record the name of the species or substance being eaten or describe it in the comments field.

Dead caterpillars
One or more dead caterpillars are seen, including those found on roads.

Dead adults
One or more dead adults are seen, including those found on roads.
