

Growing Your Own Seedlings

Below is a diagram of an inexpensive light apparatus made of 3/4 inch PVC pipe. It's handy for 3 reasons:

- If you don't glue it, it will come apart for easy storage.
- It is expandable, so you can add more lights when necessary.
- The light height is adjustable, and should be only 1" to 2" above the top of the seedlings.

The design uses regular shop lamps or strip lamps, each taking a cool white and a warm white fluorescent bulb.
